ABSTRACT OF THE DISCLOSURE

1

2   The present invention discloses a system for real-time device driver error handling. The

3   system includes a user computer having a device driver, a monitoring unit and a device drive

4   information, the monitoring unit monitoring an operating state and searching the device driver

5   information, and outputting the diagnosing message to the user when the device driver errors occur,

6   a web server having a driver error handling program, the device drive error handling program storing

7   a standard driver information, performing a diagnosis of the device driver by comparing the standard

8   driver information with the device driver information, and displaying the diagnosing result on the

9   user computer.
